## 2. How to read this measure

This Project Dynamics measure describes an evidence-backed model for the current decision. It is not the complete real project and does not grant execution authority. The observation is evidence-based and is not the complete real project.

## 3. Current atomic state

- Canonical value: Clear
- Plain-language value: Current evidence uniquely identifies the relevant lifecycle state and nearest decision.
- State class: satisfied
- Blocks the current action: no
- Next owner: USER
- Exact next action: Approve MAINTENANCE 001 or request correction
- User input still required: Current evidence ties implementation and fresh required validation to one controlling task.
- Codex handles: bounded implementation, validation, document repair, and lifecycle mechanics supported by repository evidence.

## 4. Why this state was assigned

The canonical Project System, lifecycle, Project Dynamics, target, responsibility, evidence, and activity resolvers supplied this value. It is not a direct blocker; other debt remains secondary.

## 5. Required and present project files

### Required

- TODO/archive/TODO\_35\_FIX\_LESSON\_PROGRESS\_STICKY\_OFFSET.md
- TODO/archive/TODO\_36\_ADD\_LOCK\_3\_TRIANGLE\_DIAGRAMS.md

### Missing or unresolved

- None identified by the bounded path check.

## 6. Current systems relationship

- Observed state: Current evidence uniquely identifies the relevant lifecycle state and nearest decision.
- Target: Approve or request correction for MAINTENANCE 001
- Current gap: Safe copied Codex command: missing
- First safe transition: Review MAINTENANCE 001
- Preservation boundary: project identity, source, content, data, assets, outputs, approved history, and unrelated governance remain protected.
- Confidence: High; Current filesystem evidence and the selected workflow adapter strongly agree.

## 7. Measure-specific history

- This is the first adopted document observation for this measure.
- Controlling work: MAINTENANCE 001
- Current owner: USER
- Transition records: ../../history/transitions/

## 9. Known limitations and next review trigger

Refresh this document after a material canonical observation change, approval/correction/finalization event, validation result, target decision, lifecycle repair, or document-contract repair. Regeneration alone does not change project state or meaningful activity.
