2. How to read this measure

This work-control measure separates placement, start authority, implementation, validation, approval, and filesystem finalization. No one step silently implies another. The observation is evidence-based and is not the complete real project.

3. Current atomic state

- Canonical value: approved-complete
- Plain-language value: approved complete
- State class: satisfied
- Blocks the current action: no
- Next owner: NO_ACTION
- Exact next action: Nothing is required now
- User input still required: No routine input; explicit approval and special authority remain separate.
- Codex handles: bounded implementation, validation, document repair, and lifecycle mechanics supported by repository evidence.

Approval and finalization

- Exact workflow state: Completed
- Task: MAINTENANCE 001
- User approval needed: no
- Direct finalization available: no
- Source: TODO/completed/MAINTENANCE_001_RECONCILE_TODO_28_LIFECYCLE_EVIDENCE.md
- Destination: TODO/completed/MAINTENANCE_001_RECONCILE_TODO_28_LIFECYCLE_EVIDENCE.md
- Codex still must act: no
- Blocker: none

4. Why this state was assigned

The canonical Project System, lifecycle, Project Dynamics, target, responsibility, evidence, and activity resolvers supplied this value. It is not a direct blocker; other debt remains secondary.

Missing or unresolved

- None identified by the bounded path check.

6. Current systems relationship

- Observed state: approved complete
- Target: Level 3
- Current gap: Maintenance lifecycle: partial
- First safe transition: Nothing is required now
- Preservation boundary: project identity, source, content, data, assets, outputs, approved history, and unrelated governance remain protected.
- Confidence: High; Current filesystem evidence and the selected workflow adapter strongly agree.

7. Measure-specific history

- Previous value: awaiting-user-approval
- Current value: approved complete
- Prior material change: 2026-08-06T01:46:03.400Z
- Controlling work: MAINTENANCE 001
- Current owner: NO_ACTION
- Transition records: ../../history/transitions/

9. Known limitations and next review trigger

Refresh this document after a material canonical observation change, approval/correction/finalization event, validation result, target decision, lifecycle repair, or document-contract repair. Regeneration alone does not change project state or meaningful activity.
