2. How to read this measure

This Project Dynamics measure describes an evidence-backed model for the current decision. It is not the complete real project and does not grant execution authority. The observation is evidence-based and is not the complete real project.

3. Current atomic state

- Canonical value: Preservation Safe
- Plain-language value: The proposed first transition remains inside the declared preservation and non-regression boundary.
- State class: satisfied
- Blocks the current action: no
- Next owner: NO_ACTION
- Exact next action: Nothing is required now
- User input still required: No routine input; explicit approval and special authority remain separate.
- Codex handles: bounded implementation, validation, document repair, and lifecycle mechanics supported by repository evidence.

4. Why this state was assigned

The canonical Project System, lifecycle, Project Dynamics, target, responsibility, evidence, and activity resolvers supplied this value. It is not a direct blocker; other debt remains secondary.

5. Required and present project files

Required

- README.md
- AGENTS.md
- PROJECT_STATUS.md

Missing or unresolved

- None identified by the bounded path check.

6. Current systems relationship

- Observed state: The proposed first transition remains inside the declared preservation and non-regression boundary.
- Target: Level 3
- Current gap: Maintenance lifecycle: partial
- First safe transition: Nothing is required now
- Preservation boundary: project identity, source, content, data, assets, outputs, approved history, and unrelated governance remain protected.
- Confidence: High; Current filesystem evidence and the selected workflow adapter strongly agree.

7. Measure-specific history

- Previous value: Preservation Safe
- Current value: The proposed first transition remains inside the declared preservation and non-regression boundary.
- Prior material change: 2026-08-06T01:46:03.400Z
- Controlling work: MAINTENANCE 001
- Current owner: NO_ACTION
- Transition records: ../../history/transitions/

9. Known limitations and next review trigger

Refresh this document after a material canonical observation change, approval/correction/finalization event, validation result, target decision, lifecycle repair, or document-contract repair. Regeneration alone does not change project state or meaningful activity.
